Dear Sir,

RE: RECOMMENDATION FOR SILVER NITRATE IONIC SOLUTIONS 0.01%

It is my pleasure to recommend the above wound care product. Having used the product for 2 years it has given me a very good experience and outcome on wound care.

I have used on a wide range of wounds including the following:

1. Diabetic wounds
2. Wound dehiscence post surgery
3. Cancer wounds

This product has really helped in reduction of hospital stay hence reducing the cost of wound care and also reduced nasocomial infections. It has also helped me in doing home based care due to its lack of side effects.

The product due to its effectiveness has enabled me to do alternate days wound care something that has really helped me manage high number of wounds.

Due to its effectiveness it takes 3 days for low and medium exudates to clear infection and 7 days for high exudates to clear infections.

Compared to other wound care products I recommend silver nitrate ionic solutions 0.01% due to its effectiveness.

Regards.

Yours sincerely,

Brian Ole Karbolo
